THOMSON REUTERS

ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information.From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurateand validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

DISCLAIMER

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

COMPANY PROFILE

SUMMARY

Auspex Pharmaceuticals is a US pharmaceutical company that specializes in optimizing the chemo-physiological properties of existing drugs by converting them into deuterated analogs.

MERGERS & ACQUISITIONS

In January 2015, the company entered into a share purchase agreement to acquire the remaining rights to SD-1077, and related intellectual property, through the acquisition of Imphar AG. The company had previously granted Auspex exclusive US and select worldwide rights and retained European and additional worldwide rights, all of which were to be be transferred to Auspex, along with the related intellectual property, pursuant to the share purchase agreement.

FINANCIAL

In December 2014, Auspex was added to the NASDAQ Biotechnology Index.

In July 2014, Auspex priced an underwritten public offering of 30.15 million shares of common stock at $19.25 each and planned to raise gross proceeds of approximately $60.6 million. The underwriters were granted a 30-day option to purchase up to an additional 472,500 shares of its common stock. Later that month, the offering was completed and the company raised gross proceeds of approximately $69.7 million through 3,622,500 shares of its common stock including full exercise of the optional shares granted.

In March 2014, Auspex was added to the Russell 2000, Russell 3000 and Russell Global Indexes, at the close of market on March 31, 2014.

In February 2014, Auspex priced its IPO of 7 million shares of common stock at $12 per share and granted underwriters a 30-day option to purchase up to an aggregate of 1.05 million additional shares. Auspex stock was to trade on the NASDAQ Global Market under the symbol 'ASPX'. At that time, the offering was expected to close on February 10, 2014. Later in February 2014, the IPO was completed and 8,050,000 common stock shares were issued, including 1,050,000 shares from full exercise of underwriters' option.

Return to Table of Contents

In January 2014, Auspex raised a total of $35 million in two seperate financings, including $20 million in a series E equity financing and a $15 million four-year venture loan from Oxford Finance LLC.

In November 2012, Auspex raised $25 million in a series D venture financing.

In May 2008, Auspex raised $13.88 million from a series B financing round.

PRODUCT PORTFOLIO DRUG PIPELINE DETAIL

PLEASE NOTE: Highest status refers to highest development of that drug for one of the active companies

deutetrabenazine

deutetrabenazine SNAPSHOT

Drug Name	deutetrabenazine
Key Synonyms	deutetrabenazine
Originator Company	Auspex Pharmaceuticals Inc
Active Companies	Auspex Pharmaceuticals Inc
Inactive Companies	
Highest Status	Phase 3 Clinical
Active Indications	Tourette syndrome;Huntingtons chorea;Tardive dyskinesia;Heart disease
Target-based Actions	Synaptic vesicular amine transporter inhibitor
Other Actions	Monoamine release modulator;CNS modulator
Technologies	Tablet formulation;Oral formulation;Small molecule therapeutic
Last Change Date	15-Jan-2015

deutetrabenazine DEVELOPMENT PROFILE

SUMMARY

Auspex is developing a novel inhibitor of the vesicular monoamine transporter 2 (VMAT-2), deutetrabenazine (d6-tetrabenazine; SD-809), a hexadeuterated tetrabenazine analog (a monoamine depleter), for the potential oral treatment of Huntington's disease (HD), Tourette syndrome, tardive dyskinesia and cardiac diseases including cardiac arrhythmia ,. In June 2013, phase III studies began in Huntington's disease ; in June 2014, interim data from ARC-HD Switch study were reported. In July 2014, a phase II/III trial was initiated for drug-induced tardive dyskinesia; at that time, an additional phase III trial was planned for later that year. By August 2014, a phase Ib trial for Tourette syndrome had been initiated. In October 2014, an NDA for tardive dyskinesia was planned to be filed in 2016. In December 2014, an NDA was planned to be submitted in mid-2015 for HD. In January 2015, the company planned filing an NDA in mid-2015 for cardiac diseases.

SUMMARY

Auspex Pharmaceuticals is developing SD-254, a deuterium-substituted formulation of venlafaxine, a selective serotonin-norepinephrine reuptake inhibitor, for the potential treatment of neuropathic pain and major depression disorder. By July 2012, phase I development had been completed for neuropathic pain. In March 2014, the drug was in phase II development for mood disorder. At that time, the company was seeking to outlicense the drug.
